**MD Anderson Cancer Center's Lymphoma-Myeloma Fellowship Program** trains internists and Oncologist in the diagnosis, evaluation, and management of patients with Hodgkin and non-Hodgkin lymphomas, multiple myeloma and plasma cell dyscrasias. Through a combination of outpatient and inpatient clinical rotational assignments, Fellows receive training in the application of standard of care as well as novel therapeutics, such as CAR T and other cellular therapies, bi-specific antibodies, targeted molecules, and new agents under clinical trials. Through structured mentorship, the Fellows are also expected to participate in clinical research, present their projects and write their results for publication. The overall goal of our program is to prepare future academic leaders and clinical experts in this domain of hematological malignancies.

**At the completion of one year of training, each fellow will be prepared to assume independent clinical responsibilities and investigations.**

## Our program includes:

- 2 months of inpatient service
- 3 clinic days per week
- 2 research days per week
- Weekly medical and scientific presentations and conferences
- Monthly didactic lectures from world-class faculty
- Active roles in lymphoma and myeloma research
- An assigned faculty mentor for each fellow
- 2-day course on Clinical Research Methodology; clinical trials, statistical design, biomarker trial design, utilizing of big data, and guidance on career development
